The margins have been adjusted properly to fit the multiline graph and its legend.

The x-axis represents the days of the month, and are automatically drawn on the axis. I chose not to add a title because this data is quite self-explanatory.

The y-axis represents the temperature in Celsius degrees, here it is necessary to add a title, to distinguish Celsius from Fahrenheit.

The colours of the lines are all in different elemental colours, it clearly shows the difference between the Maximum temperature, minimum temperature and Average Temperature.

The font is sans-serif as it is comfortable to read.
